

i.d. mate Quest

Audible Identification & Information Assistance for the Blind & Visually Impaired

Technology

Text-to-speech and **digital voice recording** technologies allow the blind or print-impaired user to access items in their environment with a simple scan of a bar code. This talking bar code scanner provides instant identification of products, access to information, and affords a more independent life.

Programmable bar code labels are provided to label any item that does not already have a bar code.

Built-in database items include grocery, health & beauty, pets, cleaning, vending, CDs & DVDs. Extended information such as instructions, ingredients and warnings are included for many items. This multi-million item database is just the beginning; tailor to personal needs by adding items. Country-specific databases are available.

Wi-Fi and Bluetooth connectivity make the database truly infinite. With direct access to numerous internet resources the user can update the database, look up unidentified items and online pricing via Google™.

On-board camera provides access for currency identification, and other features such as **Skype™** internet phone (beta). Use the integrated camera to get help reading documents, locating items, or for staying connected with family and friends.

mp3 capabilities allow the user to store and access music and audio files.

Features

- Cyclone Scanner
 - Quick, reliable scans
- Lightweight and Portable
 - 6 inches, 7 ounces
- Micro SD Memory Card
 - 8 GB capacity
- Memo Recorder
 - Record, play & erase messages
- Inventory Capability
 - Manage product inventory
